

Re: Restriction of Hazardous Substances (RoHS) Directive & REACH European Union Regulation

Dear Customer,

Reotemp is dedicated to serving you by manufacturing high quality pressure and temperature instruments that meet environmental regulations, including the following:

- European Union (EU) RoHS2 Directive 2011/65/EU and subsequent amendments regarding the use of certain hazardous substances in electrical and electronic equipment (EEE)
- REACH (Registration, Evaluation, Authorization and Restriction of Chemicals, European Union Regulation (EC) 1907/2006) regulation addressing the production and use of chemical substances.

Standard Reotemp products are fully compliant with the RoHS2 EU Directive 2011/65/EU. These products are compliant to the legislation requiring less than 0.1% by weight each of lead, mercury, hexavalent chromium, PBB, PBDE, DEHP, BBP, DBP and DIBP and 0.01% by weight of cadmium.

Certain Reotemp pressure gauge products made with brass components may contain lead as an alloying element. The RoHS European Union directive 2011/65/EU allows copper alloys such as brass to contain up to 4% lead. The Reotemp products referenced are manufactured from brass containing less than 4% lead and therefore meet the European Union RoHS directive.

Reotemp products are also compliant with regulations EC1907/2006 (REACH) and do not contain Substances of Very High Concern (SVHC) in excess 0.1% by weight. As a producer of "articles" under the definition of the REACH regulations EC1907/2006, we foresee no registration requirements for the products we supply.

Reotemp is continually reviewing the list of chemicals and the composition of our many products and updating literature and product packaging to comply with the current regulations.

Sincerely,

Bharat Naik
President
Reotemp Instrument Corporation
