

Restriction of Hazardous Substances (RoHS) Directive & REACH European Union Regulation

Dear Customer,

Reotemp is dedicated to serving you by manufacturing high quality pressure and temperature instruments that meet environmental regulations, including the following:

- European Union RoHS 3 (EU Directive 2015/863) requirements and subsequent amendments regarding the use of certain hazardous substances in electrical and electronic equipment (EEE)
- REACH (Registration, Evaluation, Authorization and Restriction of Chemicals, European Union Regulation (EC) 1907/2006) regulation addressing the production and use of chemical substances.

Standard Reotemp products are fully compliant with the RoHS 3 EU Directive 2015/863. These products are compliant to the legislation requiring less than 0.1% by weight each of Lead, Mercury, Chromium VI (hexavalent), Polybrominated biphenyls (PBB), Polybrominated biphenyl ethers (PBDE), certain phthalates and 0.01% by weight of cadmium.

Certain Reotemp pressure gauge products made with brass components may contain lead as an alloying element. The RoHS 3 EU Directive 2015/863 allows copper alloys such as brass to contain up to 4% lead. The Reotemp products referenced are manufactured from brass containing less than 4% lead and therefore meet the European Union RoHS directive.

Reotemp products are also compliant with regulations EC1907/2006 (REACH) and do not contain substances listed on the Candidate List of SVHC's in excess 0.1% by weight.

Article 57 and Annex XIV. As per the latest update on 27 June 2024 there are 241 substances on the SVHC list.

As a producer of "articles" under the definition of the REACH regulations EC1907/2006, we foresee no registration requirements for the products we supply.

Reotemp is continually reviewing the list of chemicals and the composition of our many products and updating literature and product packaging to comply with the current regulations.

Sincerely,

Bharat Naik
Chief Operations Officer
Reotemp Instrument Corporation
