

California Proposition 65 Product Compliance

Dear Customer,

Reotemp Instruments is committed to meeting all product safety requirements applicable to our products, including California's Proposition 65 (Prop 65) standard.

Prop 65 regulation applies to any company operating, manufacturing or selling its products in the state of California. The purpose of Prop 65 is to ensure the public is informed about the potential exposure to chemicals known to cause cancer, birth defects, or other reproductive harm. Proposition 65 requires the State of California to publish a list of these chemicals. This list currently contains over 880 chemicals and continues to expand. The law also requires companies to provide a warning on their products and/or packaging if they contain any of these chemicals.

The warning does not mean the products will inevitably cause cancer or reproductive harm. Proposition 65 may be best defined as a "Right to Know" law. It is important to understand that even though a product may contain a Prop 65 listed chemical, it does not mean that the use of the product will cause any adverse health effects, nor does it mean that a product is violating safety standards or regulations.

The Office of Environmental Health Hazard Assessment (OEHHA) administers the Proposition 65 program. After careful review of the OEHHA Prop 65 list of chemicals and the composition of our products, the vast majority of products manufactured by Reotemp do not contain materials listed on the Prop 65 list. The only exception is nickel (metallic), an option on certain diaphragm seals. Unless nickel is specifically selected by the customer, please be assured that products purchased from Reotemp are free from Prop 65 regulations.

Reotemp is continually reviewing the list of chemicals and the composition of our many products and updating literature and product packaging to comply with the current regulations. For more information about this regulatory program, please visit the OEHHA website at <https://www.p65warnings.ca.gov/>.

Sincerely,

Bharat Naik
Chief Operations Officer
Reotemp Instrument Corporation
